 Abstract:

medicine, oncogynecology. SUBSTANCE: the method deals with catheterization of the inner iliac arteries alternately during one angiographic procedure due to access from one femoral artery. Embolization of iliac arteries is carried out. It is conducted the bolus introduction of chemopreparations together with finely reduced hemostatic sponge into each iliac artery. Detoxication therapy is performed during 1.5-2 h after introduction of chemopreparations. Ray therapy is additionally conducted in 2-3 wk after regional bolus chemotherapy. The method enables to decrease traumaticity and intraoperational complications. EFFECT: higher efficiency of therapy. 3 cl, 1 ex
